Contents

1	Identifier Variables	2
1.1	Country Name (<i>country</i>)	2
1.2	COW Code (<i>COWcode</i>)	2
1.3	Year (<i>year</i>)	2
2	ICC Measures	2
2.1	ICC Involvement (<i>involvementm</i>)	2
2.2	Rome Statute Ratification (<i>ICC_Ratification</i>)	2
3	Democracy and Justice System Indicators	2
3.1	Liberal Democracy (<i>v2x_libdem</i>)	3
3.2	Access to Justice (<i>v2xcl_acjst</i>)	3
3.3	Civil Society (<i>v2xcs_ccsi</i>)	3
4	Conflict, Atrocity, and Power Measures	3
4.1	Conflict (<i>conflict</i>)	4
4.2	Atrocities (<i>log_atrocities</i>)	4
4.3	Security Council Member (<i>p5</i>)	4
5	Statement Content Measures	4
5.1	Intervention (<i>intervention</i>)	4
5.2	Investigation (<i>investigation</i>)	4
5.3	Prosecute (<i>prosecute</i>)	5
5.4	State Cooperation with ICC Investigation (<i>stateCinv</i>)	5
5.5	State Cooperation with ICC Prosecution (<i>stateCpros</i>)	5

1 Identifier Variables

1.1 Country Name (*country*)

Name of country i .

1.2 COW Code (*COWcode*)

Unique country identifier code, from the Correlates of War Project (?).

1.3 Year (*year*)

Year. In the “RAData.RData” file, this is the year in the panel.

2 ICC Measures

The following measures of ICC involvement and Rome Statute ratification were all the result of original data collection and hand-coding. As explained in section 2.2 and in the Appendix, some information was collected directly from the ICC website, while other information was collected from newspaper articles and secondary sources. An overview of coding decisions and the relevant underlying sources are included in the “ICCInvolvement-Coding.pdf” document elsewhere in the replication materials.

2.1 ICC Involvement (*involvementm*)

Indicator variable that captures the minimalist measure of involvement by the ICC. It takes the value of 1 for all years country i experiences the involvement from the ICC Prosecutor, beginning with the first public complaint made to the Prosecutor or first public statement made by the Prosecutor and ending when the ICC closes a preliminary examination or investigation. It otherwise takes the value 0. In the case of a closed investigation, it takes the value of 0 only after all cases have been completed.

2.2 Rome Statute Ratification (*ICC_Ratification*)

This is an indicator variable that takes the value of 1 if country i ratified the Rome Statute in year t , and takes the value of 0 otherwise. This data was collected from the ICC website at <https://asp.icc-cpi.int/states-parties> and hand coded for the country-years of the panel.

3 Democracy and Justice System Indicators

The following democracy and justice measures were collected from the *Varieties of Democracy* (VDem) Dataset, based on the VDem expert survey (?). They can be gath-

ered using the “vdem” package in *R*, but can also be downloaded directly from the VDem website at <https://www.v-dem.net/>.

3.1 Liberal Democracy (*v2x_libdem*)

A continuous measure from 0-1 (low to high), the liberal democracy index comes from the VDem survey question that states “To what extent is the ideal of liberal democracy achieved?”

Clarification: The liberal principle of democracy emphasizes the importance of protecting individual and minority rights against the tyranny of the state and the tyranny of the majority. The liberal model takes a "negative" view of political power insofar as it judges the quality of democracy by the limits placed on government. This is achieved by constitutionally protected civil liberties, strong rule of law, an independent judiciary, and effective checks and balances that, together, limit the exercise of executive power. To make this a measure of liberal democracy, the index also takes the level of electoral democracy into account.” (? , 45)

3.2 Access to Justice (*v2xcl_acjst*)

A continuous measure from 0-1 (low to high), the access to justice measure comes from the VDem survey question that states “Do citizens enjoy secure and effective access to justice?” (? , 304)

3.3 Civil Society (*v2xcs_ccsi*)

A continuous measure from 0-1 (low to high), the core civil society index comes from the VDem survey question that states “How robust is civil society?”

Clarification: The sphere of civil society lies in the public space between the private sphere and the state. Here, citizens organize in groups to pursue their collective interests and ideals. We call these groups civil society organizations CSOs. CSOs include, but are by no means limited to, interest groups, labor unions, spiritual organizations if they are engaged in civic or political activities, social movements, professional associations, charities, and other non-governmental organizations. The core civil society index CCSI is designed to provide a measure of a robust civil society, understood as one that enjoys autonomy from the state and in which citizens freely and actively pursue their political and civic goals, however conceived.” (? , 309)

4 Conflict, Atrocity, and Power Measures

The following conflict and atrocity measures were collected from the Uppsala Conflict Data Program’s *Georeferenced Events Dataset - Version 21.1* (GED), and were transformed by separating various measures of casualties and aggregating over time as outlined below (?).

4.1 Conflict (*conflict*)

Takes the value of 1 if country i in year t had an active civil conflict as defined by UCDP.

4.2 Atrocities (*log_atrocities*)

This measure takes the natural log of the cumulative sum of the number of civilians that were subject to one-sided violence in country i from 1989 to year t , as measured by the GED.

I calculate this aggregate measure by first merging the GED with the UCDP Armed Conflict Dataset - Version 21.1 (?), and filter the conflict type to non-international armed conflict (type of conflict == 3 or 4). I then further filter the dataset to only state-based conflict (type of violence == 1) and then calculate the annual sum of casualties suffered by side_b when side_a is the government and side_b includes civilians. Note that according to the GED Dataset, side_b in “one-sided violence is always ‘civilians’” (? , 17). I then calculate the annual sum of casualties suffered by side_b when side_a is not the government and side_b includes civilians. I take the annual sum of these measures as an overall annual measure of atrocities, or one-sided violence against civilians by either the government or another actor. Finally I take the natural log of the atrocities measure.

4.3 Security Council Member (*p5*)

Binary variable that takes the value of 1 if country i in year t is one of the five permanent members of the UN Security Council:

1. China
2. France
3. Russia
4. United Kingdom
5. United States

It otherwise takes the value of 0.

5 Statement Content Measures

5.1 Intervention (*intervention*)

Count variable. It is the sum of the number of statements made by human rights organizations that support ICC intervention and also mention country i in year t .

5.2 Investigation (*investigation*)

Count variable. It is the sum of the number of statements made by human rights organizations that support an ICC investigation and also mention country i in year t .

5.3 Prosecute (*prosecute*)

Count variable. It is the sum of the number of statements made by human rights organizations that support an ICC prosecution and also mention country i in year t .

5.4 State Cooperation with ICC Investigation (*stateCinv*)

Count variable. It is the sum of the number of statements made by human rights organizations that advocate that states provide support for an ICC investigation and also mention country i in year t .

5.5 State Cooperation with ICC Prosecution (*stateCpros*)

Count variable. It is the sum of the number of statements made by human rights organizations that advocate that states provide support for an ICC prosecution and also mention country i in year t .
